Evolution in bacteria, viruses, fungus, and other microorganisms is a challenge for today's medical technology, since evolution in these living organisms is reducing the effect of traditional medicines. Fetal diseases and blood-borne diseases are spreading very fast due to environmental changes such as global warming and others. For controlling such diseases, research is being performed to find out effective medicines, antibiotics, and other immune boosters. For studying the reaction of organisms or group of organisms for antibiotics, antimicrobial susceptibility testers are used in hospitals, laboratories, and other research locations. Due to the changing nature of pathogens, bacteria, and other disease-spreading organisms, research activities are being carried out continuously, due to which, the demand for antimicrobial susceptibility testers is increasing from the past few years.
