The global Antimony Bismuth Telluride market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

Antimony bismuth telluride, often abbreviated as Sb-Bi-Te or SBT, is a compound made up of the elements antimony (Sb), bismuth (Bi), and tellurium (Te). It is part of the broader family of thermoelectric materials known for their ability to efficiently convert heat differentials into electricity and vice versa.

Antimony bismuth telluride is a promising thermoelectric material with properties that make it suitable for various applications. Its thermoelectric efficiency is influenced by its composition and specific processing techniques.

Thermoelectric Generators: Antimony bismuth telluride is used in thermoelectric generators (TEGs) to convert waste heat into electrical power. This has applications in industries such as automotive, where it can improve fuel efficiency by utilizing waste heat from the engine.

Thermoelectric Coolers: In addition to power generation, Sb-Bi-Te can also be employed in thermoelectric coolers (TECs), also known as Peltier coolers. These devices can cool electronic components, optical sensors, and other applications by using the Peltier effect, which absorbs heat when an electrical current is applied.

Space Missions: Thermoelectric materials, including antimony bismuth telluride, are used in space missions for power generation and temperature regulation. They are reliable in extreme conditions.
