## Abstracts

The global Antioxidant Silicone Oil market size is predicted to grow from US\$ 864 million in 2025 to US\$ 1325 million in 2032; it is expected to grow at a CAGR of 6.3% from 2026 to 2032.

Antioxidant silicone oil is a modified polydimethylsiloxane (PDMS) or functional silicone fluid formulated with antioxidant additives—such as hindered phenols, phosphites, or organosilicon stabilizers—to inhibit thermal oxidation, viscosity increase, and molecular chain scission during long-term exposure to heat, oxygen, and mechanical stress. It is widely used as a high-temperature lubricant, heat-transfer fluid, dielectric fluid, mold-release agent, and protective coating in electronics, automotive, industrial processing, and aerospace applications. The supply chain begins upstream with refined silicon metal and methyl chloride used to produce siloxane monomers via the Rochow process, followed by polymerization into base silicone oils by silicone producers. In the midstream stage, these base fluids are compounded with antioxidant packages, viscosity modifiers, and purity enhancers by specialty chemical and silicone formulators. Downstream, the finished antioxidant silicone oils are packaged and supplied to OEMs, lubricant blenders, electronics manufacturers, and industrial end users, either as standardized grades or application-specific customized formulations. In 2025, the global antioxidant silicone oil market is estimated to achieve an annual production volume of approximately 210,000 tons against a global production capacity for antioxidant and specialty grades of about 260,000 tons per year, recording an average unit price in the range of USD 3,000 to 5,000 per ton, while the industry maintains a relatively strong gross margin of roughly 32%.
