An antistatic tube is a tube designed to prevent static electricity build-up.

Traditional tubes, which lack antistatic properties, are often covered with conductive materials like metal wire or mesh. This method, while effective at preventing static build-up, can be labor-intensive and risks losing grounding if not properly applied. Moreover, metallic coverings are unsuitable for corrosive environments.

In contrast, antistatic tubes have inherent conductivity, eliminating the need for additional covering and addressing these challenges effectively.

The global Antistatic Tube market size is projected to grow from US\$ million in 2024 to US\$ million in 2030; it is expected to grow at a CAGR of %from 2024 to 2030.
