The global AP Automation Software System market size is predicted to grow from US$ million in 2025 to US$ million in 2032; it is expected to grow at a CAGR of %from 2026 to 2032.

Accounts payable automation enables companies to touchlessly process supplier invoices without human intervention by providing a digital workflow to manage steps previously handled by an AP staff member.

Holistic accounts payable automation enables automated start-to-finish business payment processing. This starts with software that captures invoice data in a digital format, usually through a form of scanning or capture method, such as optical character recognition (OCR). The AP system then classifies, matches, and validates data, and forwards to the accounting system or ERP to be processed.

Accounts payable automation can provide significant cost savings for a company beyond the expected savings from eliminating manual tasks. Companies can optimize their vendor portfolio, avoid duplicate or erroneous payments, reduce fraud risk, and take advantage of early payment discounts.
