The global APD Avalanche Photodiode market size is predicted to grow from US\$ 152 million in 2025 to US\$ 190 million in 2031; it is expected to grow at a CAGR of 3.7% from 2025 to 2031.

APD Avalanche Photodiode (APD) is a highly sensitive semiconductor electronic device that exploits the photoelectric effect to convert light to electricity. APDs can be thought of as photodetectors that provide a built-in first stage of gain through avalanche multiplication. From a functional standpoint, they can be regarded as the semiconductor analog to photomultipliers. By applying a high reverse bias voltage, APDs show an internal current gain effect due to impact ionization. However, some silicon APDs employ alternative doping and beveling techniques compared to traditional APDs that allow greater voltage to be applied before breakdown is reached and hence a greater operating gain. In general, the higher the reverse voltage, the higher the gain.

APD Avalanche Photodiode (APD) applicability and usefulness depends on many parameters. Two of the larger factors are: quantum efficiency, which indicates how well incident optical photons are absorbed and then used to generate primary charge carriers; and total leakage current, which is the sum of the dark current and photocurrent and noise. Electronic dark noise components are series and parallel noise. Series noise, which is the effect of shot noise, is basically proportional to the APD capacitance while the parallel noise is associated with the fluctuations of the APD bulk and surface dark currents. Another noise source is the excess noise factor, ENF. It describes the statistical noise that is inherent with the stochastic APD multiplication process. This is not to be confused with the fano noise (F), which describes the

fluctuation of the total electric charge collected in the APD.

Global APD Avalanche Photodiode key players include First-sensor, Luna, Hamamatsu, etc. Global top three manufacturers hold a share over 45%.

Europe is the largest market, with a share about 35%, followed by Japan, and North America, both have a share over 45 percent.

In terms of product, Si APD is the largest segment, with a share over 50%. And in terms of application, the largest application is Mobility, followed by Industrial, etc.
