The global APD Chips market size is predicted to grow from US$ 165 million in 2025 to US$ 223 million in 2032; it is expected to grow at a CAGR of 4.5% from 2026 to 2032.

The APD chip is a high-performance photodetector that can provide high sensitivity and fast response under weak light conditions. When photons are irradiated onto the semiconductor material of the APD chip, electron-hole pairs are generated. Under high reverse bias, the generated electron-hole pairs gain sufficient kinetic energy under the action of a strong electric field, collide with lattice atoms, generate more electron-hole pairs, and form an avalanche multiplication effect, thereby amplifying the light signal. Through the avalanche multiplication effect, the APD chip converts the received light signal into an electrical signal and amplifies the signal. It is widely used in optical communications, lidar, security monitoring and other fields.

United States market for APD Chips is estimated to increase from US$ million in 2025 to US$ million by 2032, at a CAGR of % from 2026 through 2032.

China market for APD Chips is estimated to increase from US$ million in 2025 to US$ million by 2032, at a CAGR of % from 2026 through 2032.
