API Medium Pressure Filter Press is an instrument used to determine the filtration characteristics of drilling fluids under static conditions and the formation of filter cake. It simulates the state of drilling fluid at rest on the wellbore by applying a pressure difference, measuring the amount of fluid filtered out and generating a filter cake. It is an important tool for drilling fluid control and treatment, commonly used in oil fields, geological exploration, and laboratories.

Upstream raw materials and core components mainly include metal materials, pressure control elements, gas source equipment, and basic electrical components. Downstream applications are highly concentrated in the oil and gas exploration and development sector. In drilling fluid performance evaluation, geological exploration laboratories, and related research institutes and quality testing organizations, this instrument is a key and essential device for measuring drilling fluid filtration loss and filter cake formation.
