The global API Non-condensing Steam Turbine market size is predicted to grow from US$ 1011 million in 2025 to US$ 1331 million in 2031; it is expected to grow at a CAGR of 4.7% from 2025 to 2031.

An API Non-Condensing Steam Turbine is a type of steam turbine that operates in compliance with the API (American Petroleum Institute) standards, designed specifically for applications where steam exhausts at a pressure higher than atmospheric pressure. Unlike condensing turbines, non-condensing turbines release steam into a downstream process or directly into the atmosphere without condensing it into liquid form. These turbines are widely used in industries where steam is required for secondary processes after power generation, such as heating, drying, or chemical processing.
