The global API Security Management and Control Platform market size is predicted to grow from US$ 5802 million in 2025 to US$ 10850 million in 2031; it is expected to grow at a CAGR of 11.0% from 2025 to 2031.

API Security Management Platform is a security solution for managing and securing application programming interfaces (APIs). The API security management and control platform is becoming more and more comprehensive. It not only provides basic API authentication and authorization functions, but also includes functions such as API traffic management, API data encryption, API vulnerability scanning, and API behavior analysis. Through a comprehensive platform, multiple APIs can be managed and secured in an integrated environment, providing comprehensive security protection. As the number and complexity of APIs grows, manually managing API security becomes increasingly difficult and time-consuming. Therefore, the API security management and control platform tends to be automated and intelligent, which can automatically identify and block malicious requests, monitor abnormal activities, provide real-time alarm and analysis functions, improve security and reduce the burden of manual management.
