An app monetization platform refers to a platform that provides a way for developers and apps to achieve revenue and profitability. These platforms typically offer a variety of tools and services to help developers turn their apps into revenue streams, such as through ad impressions, paid subscriptions, in-app purchases, and more.

The app monetization platform is currently in a highly competitive and rapidly evolving phase. Its core is to generate revenue through diversified models such as advertising, in-app purchases, subscriptions, developer tools, and distribution channels. Platforms attract developers and advertisers by leveraging data analytics, targeted advertising, improved payment and settlement efficiency, and rich ecosystem capabilities (tool-based analytics, A/B testing, phased pricing, etc.). Meanwhile, policy compliance, privacy protection, cross-border payments, and monetization transparency have become key challenges. Apps with high-quality content and high user retention are more likely to achieve long-term, stable revenue growth.
