Apple is the most consumed and largest produced fruit in the United States. Apple contains alpha hydroxyl acids which provide antioxidant protection which neutralizes the free radicals present in the environment to protect the skin, thus allows a skin to look healthier and younger. Apple extract is a natural blend of phloridzin, polyphenols, and chlorogenic acid with fine light red-brown powder which is very stable and completely soluble in water. Every one kg of apple extract is extracted from 500-600 baby green Fuji apples. It gives good delicious apple flavor in cakes, pies, and other baked goods. We can deepen the apple flavor, even when using fresh apples in our recipe. Apple extract gives a boost to canned and frozen fruits. It has very stable quality even to heat, acid and also have high adaptability to processing. The use of apple extract in skin care has grown steadily in the past few years. In both mass market and selective distribution, this acidic and vitamin-rich fruit appears in a face and body care. The vitamin C in the apple extract is the key ingredient which claims to reduce dark spots and even out skin tone over time.
