Application transformation is an umbrella term that encompasses everything from reducing the number of applications within an enterprise to moving applications to the cloud to ensuring that apps meet updated compliance and governance requirements. The transformation process often involves the establishment of an application portfolio and management program.

Evolving customer needs are forcing companies to innovate quickly. However, most developers in the world are still using old tools to handle legacy applications on obsolete platforms. Wanting to migrate to the cloud is often hampered by a combination of complex applications that are tightly coupled and missing documents. Moreover, companies are filled with manual, cumbersome processes designed to minimize risk

and maintain compliance, which is the most important impediment. As a result, software can't be released frequently, and publishing is extremely time consuming.
