The global Aquaculture Basic Premix market size is predicted to grow from US\$ 1485 million in 2025 to US\$ 2151 million in 2032; it is expected to grow at a CAGR of 4.8% from 2026 to 2032.

In 2025, global production of aquaculture basic premix reached approximately 1,286,500 metric tons, with an average selling price of around USD 1,180 per ton. Aquaculture basic premix is a functional feed additive composed of scientifically formulated combinations of vitamins, minerals, amino acids, and other functional ingredients. It is typically added at low inclusion rates to compound or concentrated aquafeeds to meet the essential micronutrient requirements of fish, shrimp, and other aquatic species at different growth stages. Rather than being used as a finished feed, basic premix serves as a critical intermediate input in the aquafeed industry, playing an indispensable role in ensuring nutritional balance, feed stability, and production efficiency within large-scale and industrialized aquaculture systems.

Currently, the aquaculture basic premix market is in a mature and stable development stage, with demand closely tied to aquaculture output and the penetration rate of industrial compound feeds. Market conditions indicate that basic premix has become a rigid requirement for major farmed species such as shrimp, tilapia, carp, and salmonids, with primary customers being large feed groups and regional aquafeed manufacturers that place strong emphasis on product consistency, formulation adaptability, and supply reliability. In terms of development trends, the industry is gradually shifting from merely meeting basic nutritional requirements toward precision nutrition, species-specific formulations, and multifunctional premix solutions, while placing greater emphasis on raw material traceability and regulatory compliance. Market perspectives suggest that although rapid growth is unlikely, aquaculture basic premix remains a foundational and

non-cyclical product within the aquafeed value chain, with industry concentration expected to increase steadily alongside the consolidation of large-scale aquaculture and feed enterprises.
