Abstracts

The global Aquaculture Cage Net market size is predicted to grow from US\$ 285 million in 2025 to US\$ 379 million in 2032; it is expected to grow at a CAGR of 4.3% from 2026 to 2032.

In 2024, global Aquaculture Cage Net production reached approximately 690 k units with an average global market price of around US\$ 400 per unit, a single-line production capacity of approximately 5,000 units/year, and a gross profit margin of approximately 15%-30%. Aquaculture cage nets are engineered, three-dimensional net enclosures used to contain and rear fish or other aquatic organisms in open water bodies such as coastal zones, fjords, lakes and reservoirs, while allowing continuous water exchange with the surrounding environment. A cage net typically forms a vertically suspended bag or “sock” attached to floating rings and sinker tubes, fabricated from high-strength synthetic fibres such as HDPE, nylon, polyester or UHMWPE that are braided or Raschel-knitted into mesh panels and seamed together with reinforced ropes. The mesh size, twine diameter, and overall depth of the net are tailored to species, biomass density, current and wave conditions in order to minimise escape risk, structural deformation and fish welfare issues.

Demand is driven by the expansion of cage-based salmon, trout, seabass, seabream and tilapia farming, particularly in Norway, Chile, Scotland, Canada, the Mediterranean and parts of Asia, as well as by stricter technical standards and environmental regulations that require higher breaking strength, escape-prevention, and documented design life for nets. At the same time, the segment is shaped by cost pressure from farmers and volatility in polymer and fibre prices, which encourage longer-lasting nets, modular repair, and leasing or service-based models. Technological trends include increased use of UHMWPE fibres, knotless Raschel constructions to reduce damage

and improve fish welfare, copper-alloy or coated antifouling solutions to lower cleaning costs, and integration with net-washing, inspection and digital monitoring services. Overall, the aquaculture cage net market is expected to grow slightly faster than the mature fishing-nets segment, supported by offshore farming projects and ongoing replacement and upgrading cycles in traditional near-shore cage regions.
