Aquaculture Feed Dispenser is a specialized equipment system used to deliver feed to farmed fish, shrimp, and other aquatic animals at controlled times and quantities. It generally consists of a feed hopper, dispensing mechanism, motor, controller, power supply, and supporting frame, with different designs adapted to ponds, cages, tanks, or recirculating aquaculture systems. Advanced models may provide programmable feeding schedules, remote control, automatic adjustment, solar power, or feeding data management. The equipment helps improve feeding consistency, reduce labor requirements, and limit feed waste caused by excessive or uneven feeding. The product scope covers dedicated automated or semi-automated feeding equipment for aquaculture operations.

The industry chain begins upstream with motors, gear assemblies, controllers, sensors, batteries, solar components, plastic or stainless-steel hoppers, mechanical structures, waterproof housings, and electrical components. Midstream manufacturers integrate
