Aquaculture Water Circulation Pumps refer to pump equipment and pump assemblies used to maintain continuous water movement, recirculation, water exchange, supply, filtration-side transfer, and hydraulic balance in commercial aquaculture systems. The scope focuses on pump hardware and pump packages used in aquaculture production and life support applications, including centrifugal pumps, axial-flow pumps, mixed-flow pumps, low-head high-flow propeller pumps, submersible pumps, inline pumps, seawater-resistant circulation pumps, and variable-frequency pump units. These pumps are designed or selected to operate in freshwater, seawater, brackish water, and aquaculture water containing moderate suspended solids. Key specifications include flow rate, head, hydraulic efficiency, continuous-duty capability, corrosion resistance, sealing design, VFD compatibility, maintenance interval, and energy efficiency. Typical applications include land-based recirculating aquaculture systems, industrialized fish farming, hatcheries and nurseries, tank and raceway circulation, seawater intake and exchange, public aquarium life support systems, live-holding facilities, and selected vessel-based aquaculture water circulation systems.
