Water-based hydroxypropylene dispersion is a base material for water-based coatings. It is composed of hydroxyl acrylic resin and water and has a self-emulsifying function. There are two types of aqueous hydroxypropyl dispersion: primary dispersion and secondary dispersion. Their differences mainly lie in the synthesis method, emulsifier, solvent, molecular weight, dryness and fullness. Water-based hydroxypropyl dispersion can be used with water-based isocyanate curing agents to produce water-based polyurethane coatings with excellent performance, which can be used in metal protection, wood coating, automotive electronics and other fields.

The global Aqueous Hydroxypropyl Dispersion market size is projected to grow from US\$ million in 2023 to US\$ million in 2030; it is expected to grow at a CAGR of % from 2024 to 2030.
