Geometric waveguides, also known as reflective or refractive waveguides, guide light through a series of reflections and refractions. They rely on the principles of total internal reflection (TIR) within a medium to confine and direct light. Typically, these waveguides consist of materials with a high refractive index, such as glass or polymers, and use prism-like structures or lenses to couple light in and out of the waveguide.

The global AR Geometric Waveguide Module market size is projected to grow from US\$ 61.6 million in 2024 to US\$ 664 million in 2030; it is expected to grow at a CAGR of 48.6% from 2024 to 2030.
