Augmented reality (AR) head-up displays (HUDs) are the next evolution toward creating a better driving experience. Based on real-time sensor data, key information such as advanced driver assistance system (ADAS) alerts and navigational cues are projected into the driver's field of view, interacting with and marking real world objects. Unlike traditional HUDs, graphics are projected further out, appearing as natural extensions of the driver's field of view. By placing graphics directly in the driver's line of sight that interact with and augment real world objects, AR HUDs can significantly improve driver situational awareness.
