AR remote collaboration software is used to train, collaborate, and provide technical support from a remote environment using augmented reality (AR) applications. AR remote collaboration software is often used to provide remote support in fields such as maintenance, manufacturing, automotive, and utilities. In these fields, users can connect hardware such as phones, tablets, or AR glasses to a software that provides them with visual instructions showing them how to conduct maintenance on any given piece of equipment. An example would be a piece of machinery that has broken down, and now a field worker must learn how to fix it. AR collaboration software can not only provide visual instructions that will show the worker exactly where the breakdown on the equipment is, but it can also connect him with a remote support team that can see exactly what the worker is seeing. Together they can collaborate on solving the problem using AR and visual instructions.

The global AR Remote Collaboration Software market size is projected to grow from US\$ 1088.8 million in 2023 to US\$ 1562 million in 2030; it is expected to grow at a CAGR of 5.3% from 2024 to 2030.
