AR resin optical waveguide lenses are optical lenses used in Augmented Reality (AR) devices. They employ resin material as the waveguide medium, leveraging the principle of optical waveguide to transmit image information to the human eye. Resin materials are relatively lightweight, possess a certain degree of toughness and elasticity, and are less prone to breaking upon impact. Compared to glass lenses, they offer a more comfortable and safe wearing and using experience. Additionally, the production cost of resin optical waveguide lenses is slightly lower than that of optical glass, making them a potentially widely applicable option in consumer-grade AR devices.
