AR Virtual Try-On is a technology that allows users to virtually try on products such as clothing, accessories, eyewear, makeup, and even furniture through augmented reality (AR) simulations. It enables users to see how products would look on themselves or in their environment without physically having to try them on or place them there. Using a combination of computer vision, image recognition, and AR rendering techniques, virtual try-on platforms overlay digital representations of products onto real-time images or videos of users captured through their devices' cameras. This creates an immersive and interactive experience, allowing users to visualize how different products would fit or appear before making a purchase decision. AR Virtual Try-On has gained popularity across various industries, including fashion, beauty, eyewear, and home decor, as it enhances the online shopping experience by providing a more engaging and personalized way for consumers to explore products and make informed choices.
