The global Aramid Fiber Sheet market size is predicted to grow from US\$ 3227 million in 2025 to US\$ 4757 million in 2032; it is expected to grow at a CAGR of 5.8% from 2026 to 2032.

In 2024, global Aramid Fiber Sheet production reached approximately 1647k Tons , with an average global market price of around 1896 US\$/Ton.

Aramid fiber sheet is a high-performance material made from aramid fibers, a class of synthetic fibers known for their exceptional strength, heat resistance, and lightweight properties. Aramid fibers, such as Kevlar or Twaron, are aromatic polyamides with a strong molecular structure, making them highly durable and resistant to impact, abrasion, and thermal degradation.

Safety demands drive market growth: Traditional high-altitude cleaning relies on manual labor, which carries high risks and costs, leading to a clear trend toward robotic replacement.

The photovoltaic and construction markets are driving dual growth: High-rise glass curtain wall cleaning and photovoltaic panel cleaning are currently the two largest application scenarios.

Technological integration drives product iteration: AI visual recognition, machine navigation, and suction technologies (such as vacuum cups, magnetic suction, and bionic grippers) are core competitive advantages.

Gradually improving policies and standards: Stricter safety regulations for high-altitude work in many countries are further driving the adoption of automated cleaning equipment.

The Asia-Pacific region is experiencing the fastest growth: China, the Middle East, Southeast Asia, and other regions are major growth markets due to large-scale infrastructure and new energy investments.
