## Abstracts

The global Aramid III market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

Aramid III has higher strength, modulus, better impact resistance, flame retardancy, and thermal oxygen aging resistance than para aramid, as well as lower dielectric constant, dielectric loss, and better composite performance. It has important high-end applications in winding, impact resistance, structural wave transmission composite materials, and fiber/cable reinforcement. It has been widely used in intercontinental missile engine casings, helicopter skins, individual helmets, military and police bulletproof vests, and other fields. At present, Russia's aramid III is still at the world's leading level and is the only country capable of mass production of aramid III. Compared with foreign countries, the types of aramid III series products in China are relatively single, mainly high-strength and high model, lacking differentiated varieties that can adjust performance appropriately according to different uses.

United States market for Aramid III is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.

China market for Aramid III is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.

Europe market for Aramid III is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.
