The report requires updating with new data and is sent in 48 hours after order is placed.

The global Aramid market size is predicted to grow from US\$ 5004 million in 2025 to US\$ 6981 million in 2031; it is expected to grow at a CAGR of 5.7% from 2025 to 2031.

Aramid fiber, the full name of which is 'aromatic polyamide fiber', is a new type of high-tech synthetic fiber with excellent properties such as ultra-high strength, high modulus, high temperature resistance, acid and alkali resistance, and light weight. Its strength is 5-6 times that of steel wire, its modulus is 2-3 times that of steel wire or glass fiber, its toughness is 2 times that of steel wire, and its weight is only about 1/5 of that of steel wire. It does not decompose or melt at a temperature of 560 degrees. It has good insulation and anti-aging properties and has a long life cycle.

Aramid fiber can be divided into ortho-type, para-type (PPTA) and meta-type (PMTA) according to its chemical structure, that is, the connection position between the amide group and the benzene ring. Due to the low commercial value of ortho-aramid fiber, the market is mainly para-aramid fiber and meta-aramid fiber.

The upstream of aramid fiber is mainly raw materials and production equipment for the production of aramid fiber. The raw materials of meta-aramid are mainly meta-phenylenediamine and isophthaloyl chloride, and the main raw materials of para-aramid are p-phenylenediamine and terephthaloyl chloride. The midstream of the industry is the production and sales of meta-aramid and para-aramid. The downstream is mainly used in rubber, electrical, protection, aerospace, military, automobile, communication and other industries.

The aramid industry has the characteristics of high investment threshold, high technical difficulty and high production equipment requirements, which makes the supply of the

entire aramid industry highly concentrated. The world's major aramid fiber manufacturers include DuPont, Teijin, Kolon, Hyosung, etc. China's leading companies include Taihe New Materials, Sinochem International, Zhongfang Special Fiber, Yizheng Chemical Fiber, etc.
