Abstracts

According to this study, the global Arc Flash Protection System market size will reach US\$ million by 2031.

Arc flash events are unique and extremely dangerous exposures that workers encounter while doing electrical work. Although the majority of workplace electrical injuries result from electric shock, the burns from the release of intense radiant energy during an arc flash event can cause severe, and even fatal injuries. Temperatures can reach as high as 35,000°F, with fatal burns occurring even at distances over ten feet. Given how dangerous this hazard is, protective measures must be put in place for worker safety. Arc-flash protection equipment has the functions of flame-retardant, heat-insulating, anti-static, and arc-proof, and will not fail or deteriorate due to washing. Once the arc-proof clothing comes into contact with arc flames or hot heat, the high-strength and low-strength bulletproof fibers inside will automatically expand rapidly, thereby making the fabric thicker and denser, forming a protective barrier to the human body.

The main Arc Flash Protection Equipment players include Honeywell (Salisbury), Bulwark Protection, Lakeland, Fristads, National Safety Apparel, etc. The top five Arc Flash Protection Equipment players account for approximately 36% of the total global market. North America is the largest consumer market for Arc Flash Protection Equipment, accounting for about 36%, followed by Europe and Asia-Pacific. In terms of Type, HRC 2 is the largest segment, with a share about 41%. And in terms of Application, the largest application is Power & Utilities, followed by Oil and Gas.
