Arc spraying is a technology that uses the arc burning between two continuous metal wires to melt the metal, atomizes the molten metal with high-speed air flow, and accelerates the atomized metal particles to spray them to the workpiece to form a coating. Arc spraying is one of the most widely used thermal spraying methods in steel structure anti-corrosion, wear resistance and mechanical parts maintenance. Arc spraying system is generally composed of special power supply, control device, arc spray gun, wire feeder and compressed air supply system.
