The global Arc Welding Electrodes market size is predicted to grow from US\$ 3671 million in 2025 to US\$ 4770 million in 2031; it is expected to grow at a CAGR of 4.5% from 2025 to 2031.

The impact of the latest U.S. tariff measures and the corresponding policy responses from countries worldwide on market competitiveness, regional economic performance, and supply chain configurations will be comprehensively evaluated in this report.

Arc Welding Electrodes is mainly a consumable used in Arc Welding. Arc welding is a welding process that is used to join metal to metal by using electricity to create enough heat to melt metal, and the melted metals when cool result in a binding of the metals. It is a type of welding that uses a welding power supply to create an electric arc between a metal stick ('electrode') and the base material to melt the metals at the point of contact. Arc welders can use either direct (DC) or alternating (AC) current, and consumable or non- consumable electrodes.

As an important branch of the welding materials field, the Arc Welding Electrodes industry is widely used in multiple downstream manufacturing industries such as construction, automobiles, shipbuilding, heavy machinery, oil pipelines, and steel structures.

The Asia-Pacific region is the largest production and consumption market, accounting for more than 50% of the global market share. Among them, China is the world's largest manufacturer and exporter of welding materials. As an emerging manufacturing base, India's demand for welding materials continues to grow.

The Arc Welding Electrodes industry in North America and Europe has mature technology and high standards. It is mainly based on high-end markets and special welding materials, with stable market demand. It is widely used in automated welding, robot welding, ships, wind power, and rail transportation.
