The archery compound bow is a modern mechanical bow that utilizes a lever system of cables and pulleys to bend the limbs, providing mechanical advantage and let-off. Its core functions include high-precision shooting, adjustable draw weight, and enhanced arrow velocity for hunting and competitive target archery. It is widely applied in outdoor sports, professional hunting, and international target competitions. Its product boundary covers multi-pulley compound bows and related modular setups, excluding traditional recurve and longbows.

The upstream of the industry chain includes aerospace-grade aluminum, carbon fiber, high-strength cables, and precision machining materials. The midstream involves riser manufacturing, limb fabrication, cam assembly, and tuning. The downstream encompasses specialized sporting goods stores, outdoor retail chains, e-commerce platforms, and end consumers such as hunters and archers.
