The global Archimedes Screw Pump market size is predicted to grow from US\$ 298 million in 2025 to US\$ 352 million in 2031; it is expected to grow at a CAGR of 2.8% from 2025 to 2031.

The Archimedes screw pump, also known as the Archimedean screw or simply the screw pump, is a mechanical device used for lifting or transferring fluids, typically water, from a lower elevation to a higher one. It is based on the principles attributed to the ancient Greek mathematician and inventor Archimedes, who is believed to have designed and used such a device around the 3rd century BC. The Archimedes screw pump consists of a helical screw or blade, which is housed within a cylindrical or conical casing. When the screw is rotated, it effectively lifts or pushes the fluid along its length, allowing for the transfer of liquids from one location to another.

Archimedes Screw Pumps have found applications in small-scale hydropower generation. As there has been a growing interest in renewable energy sources, particularly in environmentally sensitive areas or where grid access is limited, these pumps have been utilized in micro-hydro installations.
