Architecture Cement Asphalt Mortar is an organic–inorganic composite material primarily composed of asphalt emulsion, cement, sand, water, and other chemical admixtures.

According to the Japan Cement Association, Japan's cement industry emitted about 40 million tons of carbon dioxide in 2020. And the cement industry became the fourth largest source of carbon dioxide emissions in the industrial sector after electricity, steel and chemicals. 60% of the cement industry's carbon emissions come from process emissions, 35% from combustion emissions and 5% from indirect emissions from electricity. According to our “Building Materials Research Institute”, the global clinker capacity in 2022 was about 3.55 billion tons, and the global cement production was about 4.0 billion tons. According to the National Bureau of Statistics, China's cumulative cement output reached 2.118 billion tons in 2022.
