The Area Fan Type Static Eliminator is an active electrostatic neutralization device based on ionization principles, integrating a high-voltage ionization source with an airflow propulsion mechanism. By applying a high-voltage electric field, the device ionizes air molecules into positive and negative ions, which are then transported to the target area via directional airflow generated by a fan, thereby neutralizing accumulated static charges on surfaces or in space. Characterized by efficient coverage, rapid response, and environmental adaptability, it can effectively preventing equipment malfunctions, product defects, and safety hazards caused by electrostatic discharge.
