The global Arm Disc Brake market size is predicted to grow from US\$ 212 million in 2025 to US\$ 286 million in 2032; it is expected to grow at a CAGR of 3.4% from 2026 to 2032.

In 2025, the global production of boom disc brakes reached 255,500 units, with an average selling price of US\$850 per unit. The global annual production capacity of boom disc brakes is approximately 350,000 units, with a gross profit margin of approximately 17.2%. Boom disc brakes are common braking components used in industrial equipment, specifically designed to decelerate, stop, or position rotating parts (such as motors, spindles, worktables, turntables, etc.). They achieve braking by converting the kinetic energy of the braked component into heat energy, typically generated by one or more friction surfaces (friction surfaces on the friction disc/arm plate) clamping or pressing together under the action of a driving source (pneumatic, hydraulic, or mechanical force). The upstream of the boom disc brake industry chain includes metal materials and alloys, friction materials and coatings, seals, and lubricants; the midstream consists of boom disc brake manufacturers; and the downstream mainly comprises industries such as machinery, metallurgy, and electrical engineering.
