The global Aromatic Diglycidyl Ether market size is predicted to grow from US\$ 4830 million in 2025 to US\$ 7304 million in 2032; it is expected to grow at a CAGR of 6.1% from 2026 to 2032.

Aromatic Diglycidyl Ether (ADGE) refers to a class of epoxy compounds in which two glycidyl (epoxy) groups are attached to an aromatic backbone (typically derived from bisphenols such as bisphenol A or bisphenol F), giving the material high rigidity, thermal stability, and chemical resistance; these compounds are key intermediates and base resins in epoxy systems used in coatings, adhesives, electrical laminates, and composites. The supply chain begins upstream with petrochemical feedstocks such as benzene, propylene, and chlorine, which are used to produce phenolic compounds (e.g., bisphenol A via phenol + acetone) and epichlorohydrin (via propylene or glycerol routes); in the midstream, these two core intermediates undergo glycidylation (reaction of bisphenols with epichlorohydrin under alkaline conditions) to form aromatic diglycidyl ethers, followed by purification and formulation into liquid or solid epoxy resins; downstream, these resins are compounded with curing agents (amines, anhydrides), fillers, and additives to produce end-use materials for industries such as construction (protective coatings, flooring), electronics (PCB laminates), automotive (lightweight composites), aerospace, and wind energy, with distribution handled through chemical companies, formulators, and specialty material suppliers. In 2025, global Aromatic Diglycidyl Ether output was about 2 million tons with 2.6 million tons of capacity, average prices of USD 2,000?4,000 per ton, and gross margins around 22%.
