## Abstracts

The report requires updating with new data and is sent in 48 hours after order is placed.

An isocyanate prepolymer is a type of polyurethane prepolymer in which all of the polyol hydroxyl end groups have reacted with isocyanate groups. The end result is a compound with isocyanate functionality at the termini instead of hydroxyls.

Depending on whether it contains a benzene ring, isocyanates can generally be divided into aromatic isocyanates and aliphatic isocyanates. Aromatic isocyanates are isocyanates where the NCO group is directly attached to an aromatic ring. Aromatic isocyanates are used in applications where color stability and UV resistance are not necessary.

The global Aromatic Isocyanate Prepolymer market size is projected to grow from US\$ million in 2023 to US\$ million in 2030; it is expected to grow at a CAGR of % from 2024 to 2030.
