Arsenic Iodide(AsI₃) is orange red crystalline solid, CAS: 7784-45-4, also called arsenic(3+) triiodide, triiodoarsane, arsenic(3+), iodide (1:3), arsenous iodide. Hazardous chemicals. It is used in chemical manufacturing, pharmaceutical manufacturing and other fields.

The Arsenic Iodide market is a highly specialized segment within the chemical industry, primarily focused on the production and distribution of arsenic iodide compounds, particularly AsI₃. This chemical compound is used primarily as a reagent in organic synthesis, pharmaceutical research, and chemical analysis, where it plays a crucial role in various chemical reactions. Arsenic iodide is known for its ability to facilitate the formation of specific compounds, making it a valuable tool in the laboratory. However, it's important to note that arsenic compounds, including arsenic iodide, are highly toxic and pose significant health and environmental risks. Consequently, they are handled

with strict safety precautions and are subject to stringent regulations. Due to these safety concerns and the availability of alternative reagents, the Arsenic Iodide market is relatively small and limited to specialized applications where no suitable substitutes exist and where precise control over chemical reactions is essential.
