According to our LPI (LP Information) latest study, the global Arthroscopic Devices market size was valued at US$ million in 2023. With growing demand in downstream market, the Arthroscopic Devices is forecast to a readjusted size of US$ million by 2030 with a CAGR of % during review period.

The research report highlights the growth potential of the global Arthroscopic Devices market. Arthroscopic Devices are expected to show stable growth in the future market. However, product differentiation, reducing costs, and supply chain optimization remain crucial for the widespread adoption of Arthroscopic Devices. Market players need to invest in research and development, forge strategic partnerships, and align their offerings with evolving consumer preferences to capitalize on the immense opportunities presented by the Arthroscopic Devices market.

An arthroscopy is a minimally invasive surgical procedure used to visualize and diagnose problems in the joint through an arthroscope. Arthroscope has a small lens and the fiber optic light of the device is connected to a camera and monitor, which helps the surgeon to observe and perform surgery. This technique is carried out in the joints of knees, shoulders, hips, elbows, ankles, and wrist areas.

Arthroscopy devices are rapidly adopted to examine the bone joints for specific conditions, such as osteoarthritis, rheumatoid arthritis, tendinitis, and bone tumor. The increase in prevalence of musculoskeletal disorders (osteoarthritis and rheumatoid arthritis) due to the rapidly ageing population is the prime factor to drive the demand for arthroscopy procedure. Moreover, the growth in number of sport injuries where

arthroscopy procedure avoids the total joint replacements is anticipated to propel the market growth. In addition, the arthroscopic implants hold a dominating share in the global arthroscopic devices market, and is expected to maintain its lead during the forecast period. This is attributed to the diverse application of these implants with improved designs, such as smart and customized implants to treat different conditions and increased adoption of implants in arthroscopy procedures of damaged joints.
