Arthroscopic surgery instruments are specialized tools and devices used by orthopedic surgeons during arthroscopic surgery, a minimally invasive surgical technique used to diagnose and treat joint problems. Arthroscopy involves inserting a small camera, known as an arthroscope, into the joint through a small incision. This allows the surgeon to view the inside of the joint on a screen and perform various surgical procedures using specialized instruments.

These instruments, often made of stainless steel, include an arthroscope (a camera), probes, graspers, shavers, drills, and more. They allow surgeons to visualize, diagnose, and treat joint conditions through small incisions, reducing trauma and enhancing

recovery.
