Articulated mining truck engines are medium-power industrial diesel power units specifically designed for articulated mining dump trucks (ADTs). They are primarily used for short- to medium-distance material transport in mining and engineering settings. They typically employ an inline 6-cylinder or V-type configuration, with power outputs ranging from 500 to 1000 horsepower. Emphasis is placed on high torque output, good fuel economy, and stable operation in complex terrains such as mud and slopes. Their price is significantly lower than rigid mining truck engines, generally ranging from \$80,000 to \$200,000 per unit, depending on factors such as power output, brand configuration, and emission standards. Overall, they fall into the mid-range price range of the mining engine market. In 2025, approximately 3,474 articulated mining truck engines were installed globally.
