The global Articulated Robot for Welding market size is predicted to grow from US\$ 9784 million in 2025 to US\$ 17950 million in 2032; it is expected to grow at a CAGR of 9.2% from 2026 to 2032.

The development trend for articulated robots used in welding is focused on improving efficiency, precision, and flexibility. Robots are being equipped with advanced sensors such as vision systems, force/torque sensors, and laser scanners. These sensors help in real-time monitoring, quality control, and adaptive control of the welding process. Collaborative robots, also known as cobots, are becoming increasingly popular in welding applications. These robots can work alongside human operators, enhancing productivity and safety. They are designed to be easily programmable and have built-in safety features to prevent accidents. The development of user-friendly programming interfaces and software tools allows operators to easily program and control the robots. This reduces the need for specialized programming skills and enables faster implementation of welding tasks.
