According to this study, the global Artificial Intelligence in the Telecommunication market size will reach US\$ 9060.9 million by 2030.

Telecommunication Artificial Intelligence (AI) is intelligence demonstrated by machines for Telecommunication.

Governments around the world have recognized the impact of 5G on digital transformation and are promoting the rollout of 5G to drive artificial intelligence and automation across the telecom industry. Fifth-generation technologies are likely to drive digital transformation in wireless telecommunications, edge computing-driven Internet of Things (IoT) and artificial intelligence. The growing demand for higher quality services and non-dimensional customer experience is likely to drive the adoption of artificial intelligence in the telecommunications industry. Increased 5G deployment can create lucrative business opportunities for telecom operators to provide outsourced IT services and process automation services to enterprises powered by edge computing and artificial intelligence. Many established telecom service providers are expected to invest heavily in artificial intelligence, and these are important factors driving the revenue growth of artificial intelligence in the telecom market.
