## Abstracts

The global Artificial Intelligence Visual Algorithm Platform market size is predicted to grow from US\$ 3718 million in 2025 to US\$ 7479 million in 2032; it is expected to grow at a CAGR of 10.6% from 2026 to 2032.

An AI vision algorithm platform refers to an integrated technology platform based on artificial intelligence and computer vision technologies, providing algorithm development, training, deployment, and management for the recognition, analysis, and understanding of image and video data. This platform typically integrates deep learning frameworks, data annotation tools, model training and optimization tools, and inference deployment environments. It enables the rapid development and application of visual algorithms such as object detection, image classification, behavior recognition, and defect detection, helping enterprises achieve visual intelligence and automated decision-making in fields such as industrial manufacturing, security monitoring, autonomous driving, medical imaging, and smart cities.

The AI vision algorithm platform industry chain mainly consists of upstream hardware and data resource suppliers, midstream algorithm platform and solution providers, and downstream application industries. The upstream mainly includes GPU and AI chip manufacturers, camera and sensor equipment manufacturers, cloud computing and computing power platform providers, and data annotation and dataset service companies, providing computing power, data, and hardware infrastructure for visual algorithm training and operation. The midstream consists of AI vision algorithm platform companies, responsible for developing computer vision algorithms, model training platforms, algorithm management and deployment systems, and providing industry solutions; this is the core link in the industry chain. The downstream is widely used in fields such as intelligent manufacturing, security monitoring, autonomous driving,

medical imaging, retail analytics, and smart cities. Overall, the gross profit margin of upstream chip and cloud computing companies is usually around 40%-60%, while the gross profit margin of midstream visual algorithm platform and software service companies, which are centered on software and algorithms, is generally between 50% and 70%. The gross profit margin of downstream application companies is greatly affected by industry differences.
