The global Artificial Oxygen Carriers market size is predicted to grow from US$ 7.52 million in 2025 to US$ 25.03 million in 2032; it is expected to grow at a CAGR of 19.3% from 2026 to 2032.

Artificial Oxygen Carriers are engineered medical formulations designed to bind, transport, and release oxygen in the body to support tissue oxygenation when red blood cell oxygen delivery is inadequate or unavailable, serving as an alternative or adjunct to transfusion in selected settings. They are commonly developed as hemoglobin-based oxygen carriers that use modified cell-free hemoglobin to carry oxygen, or as perfluorocarbon-based emulsions that dissolve and shuttle oxygen through the circulation, and they are often discussed under the broader concept of oxygen therapeutics because their intended role is to improve oxygen delivery rather than to replicate every function of whole blood.

United States market for Artificial Oxygen Carriers is estimated to increase from US$ million in 2025 to US$ million by 2032, at a CAGR of % from 2026 through 2032.

China market for Artificial Oxygen Carriers is estimated to increase from US$ million in 2025 to US$ million by 2032, at a CAGR of % from 2026 through 2032.
