Food Preservatives are food additives that are used to enhance the shelf life of the food products besides maintaining the original taste, color, and aroma of the food product. These additives are responsible for controlling microbial growth which causes food spoilage. These may be synthetically derived or obtained from biological sources. Artificial preservatives may serve as antioxidants, reduce moisture content, make food more acidic, halt the ripening process, and inhibits the growth of micro-organisms, all of which help the food stay longer.

Food additives promote the development of the food industry and have become an indispensable and important part of the modern food industry. There are many kinds of food additives. In China, there are 23 types of food additives allowed to be used, totaling more than 2,400 kinds of food additives. In Europe, there are more than 4,000 kinds of food additives allowed to be used. The U.S., EU and Japan are the major

markets for food additives worldwide. According to our research, the global food preservatives market is approximately USD 34 in 2022. According to the China Food Additives and Ingredients Association, the total output of major varieties of food additives in China in 2021 was 14,840,700 tons, with sales of 139,923 million yuan.
