## Abstracts

The global Artificial Spinal Membrane market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of %from 2026 to 2032.

Artificial spinal membrane is a material prepared by artificial synthesis or bioengineering technology to replace or repair damaged dura mater. It is designed to simulate the structure and function of the natural dura mater, provide protection and support for the damaged nervous system, and promote tissue regeneration and repair. In neurosurgery and spinal surgery, damage to the dura mater is a common problem, which may lead to complications such as epidural scar formation, cerebrospinal fluid leakage, and pseudospinal meningocele (PSPM). Therefore, the development and application of artificial dura mater is of great significance to improve surgical results and reduce complications.

As an important market segment in the field of medical devices, the artificial spinal membrane market has shown a steady development trend in recent years with the advancement of medical technology and the increase in clinical demand. With the continuous improvement of China's medical level and the gradual improvement of the basic medical security system, the demand for neurosurgery medical services has continued to grow, which has promoted the continuous expansion of the artificial spinal membrane market. The domestic artificial spinal membrane market is mainly based on absorbable materials, including animal-derived collagen and absorbable polymers, and the localization rate has reached a high level. In addition, with the advancement of materials science, new biomaterials and absorbable materials continue to emerge, bringing new growth points to the artificial spinal membrane market. These new materials have better biocompatibility, degradability and mechanical properties, and can

better meet clinical needs. In the future, the artificial spinal membrane market is expected to continue to maintain a steady growth trend.
