The global Artificial Sweat market size is predicted to grow from US\$ 325 million in 2025 to US\$ 460 million in 2032; it is expected to grow at a CAGR of 5.2% from 2026 to 2032.

Artificial sweat is a simulated solution formulated in a laboratory according to a specific standard formula based on the main chemical components and physicochemical properties (such as pH value, ion concentration, and organic composition) of real human sweat. It is a standardized chemical reagent used in scientific experiments, industrial testing, and product evaluation. Its main purpose is to simulate the corrosive, irritating, and migratory effects of sweat on various materials and products under controlled and repeatable conditions to assess their durability, safety, and biocompatibility. The demand for artificial sweat stems directly from global consumer product safety regulations' testing requirements for product biocompatibility and durability, as well as manufacturers' proactive quality control needs to ensure the safety, reliability, and compliance of their products (such as jewelry, textiles, and wearable devices) in real-world usage environments. Its upstream supply chain mainly includes suppliers of fine chemical raw materials (such as high-purity sodium chloride, lactic acid, urea, and pH buffers), manufacturers of laboratory equipment, and owners of intellectual property rights for standard formulations; downstream, it widely serves third-party testing and certification agencies, quality inspection departments of consumer product manufacturers (jewelry, apparel, and electronic products), and research institutions. In 2025, the production of artificial sweat is expected to reach approximately 9.5 million liters, with an average selling price of approximately US\$35 per liter, a gross profit margin of approximately 35%, and a single production line capacity of approximately 200,000 liters per year.

United States market for Artificial Sweat is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.

China market for Artificial Sweat is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.

Europe market for Artificial Sweat is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.
