The global ASA-PC Alloy market size is predicted to grow from US\$ million in 2025 to US\$ million in 2031; it is expected to grow at a CAGR of % from 2025 to 2031.

ASA/PC is an alloy of polycarbonate PC and acrylate-styrene-propionitrile terpolymer ASA. It is a new type of polymer alloy, and its properties are similar to ABS. However, ASA has excellent UV resistance and yellowing resistance, good gloss, toughness and rigidity, and excellent heat resistance, antistatic and chemical resistance. ASA does not contain C=C double bonds and has a high glass transition temperature, but the low-temperature impact resistance is not as good as that of ABS under low-load conditions. After adding PC, the high-temperature deformation of the alloy is very small, and the impact resistance of the notch is greatly improved

United States market for ASA-PC Alloy is estimated to increase from US\$ million in 2024 to US\$ million by 2031, at a CAGR of % from 2025 through 2031.

China market for ASA-PC Alloy is estimated to increase from US\$ million in 2024 to US\$ million by 2031, at a CAGR of % from 2025 through 2031.
