Aseptic filling for sensitive beverages is a high-cleanliness filling technology specifically designed for beverages that are sensitive to heat, nutrients, or microorganisms. This technology utilizes modules such as product aseptic treatment (UHT/instant sterilization), packaging material sterilization (H<sub>2</sub>O<sub>2</sub>/VHP/UV/electron beam), an aseptic isolation system (Isolator/RABS), aseptic filling valves, and an aseptic sealing system to achieve filling of beverages at room temperature and maintain a long shelf life. This technology solves the problems of high energy consumption, flavor loss, nutrient degradation, bottle shape limitations, and the inability of lightweight bottles to withstand high temperatures associated with traditional hot filling, enabling sensitive beverages to maintain their flavor, nutrition, and safety at room temperature. The average price of this product is approximately US\$900,000 per set, with approximately 1,703 sets sold globally.
