Aseptic filling technology for PET bottles is a high-cleanliness filling process that involves filling aseptically treated beverages into sterilized PET bottles at room temperature. The system typically consists of a bottle sterilization module (H₂O₂/VHP/hot air/UV), aseptic filling valves, an aseptic sealing system, a sterile air filtration system (HEPA), an aseptic isolation system, and a CIP/SIP cleaning and sterilization system. This technology solves the problems of high energy consumption, limited bottle shape, heat-affected taste, loss of nutrients, and inability to reduce packaging weight associated with traditional hot filling, enabling beverage companies to achieve lightweight PET bottles, room temperature distribution, long shelf life, and low-energy production. Aseptic filling technology for PET bottles allows beverages to achieve high-quality filling at room temperature that is 'sterile, safe, lightweight, and low-energy.'
